

## Password Expiration/Reset

For security reasons, the AOC will require you to change your password every 90 days. At the CESN Login Screen on the mainframe, a message will appear stating your password has expired and you need to re-enter a new password. At this time, you will need to generate a new password (8 characters/numbers).

If you need to reset your password, only company administrators will have the ability to reset passwords. If you are not a company administrator and your password has been lost or revoked please contact your company administrator to reset the password.

To reset your password you must click the link, [Reset Mainframe Password](#), and your password will be reset to welcome.
